The Lifecycle of a Used Car

What is a Used Car?

A used car is a pre-owned vehicle that has had one or more owners.

Everyday usage, environmental factors, and mechanical wear and tear often lead to a decline in performance and reliability, potentially increasing the need for repairs and maintenance.

Review the used car lifecycle and be prepared for your next breakdown.

The Lifecycle Stages

BRAND NEW CAR

- Virtually no repair needs
- Factory warranty in place

· Minimal wear and tear and

- unexpected repairs Factory warranty might still be active
- (generally 3 years/30,000 miles) Beginning of more frequent maintenance

Factory warranty likely expired

Increased chances of minor repairs

MODERATELY USED

- (e.g., brakes, battery, tires, etc.) Regular maintenance required

Potential for more significant repairs

13+ YEARS

HEAVILY USED

- (e.g., transmission, exhaust system, etc.) Regular maintenance required

AGING

 High potential for major and minor repairs

Components wearing out

- (e.g., engine, suspension, etc.) Might exceed the value of the car
